

Program for Copying Information on Multiple PlanetLab Nodes

Mofassir UI Haque, Krzysztof Pawlikowski

The Department of Computer Science and Software Engineering

University of Canterbury

15 March, 2011

```
# AK_copy allows you to copy any program on multiple PlanetLab nodes.
echo "Please enter total number of nodes on which program is to be copied"
read size

echo "Please enter of name of program to be copied with full PATH" read name

echo "please enter IP address of nodes on which program is to be copied separated
by SPACE"
read -a ip

declare -i size declare -i i i=0

while [ "$i" -lt "$size" ] do

echo "Ip address is ${ip[i]}"

#Path must be changed before using program

scp -i /home/canterbury_slice1/pp "$name"
canterbury_slice1 @"${ip[i]}":/home/canterbury_slice1/ i='i + 1'

done
```
